

# CS460 Assignment 3

## Page Replacement

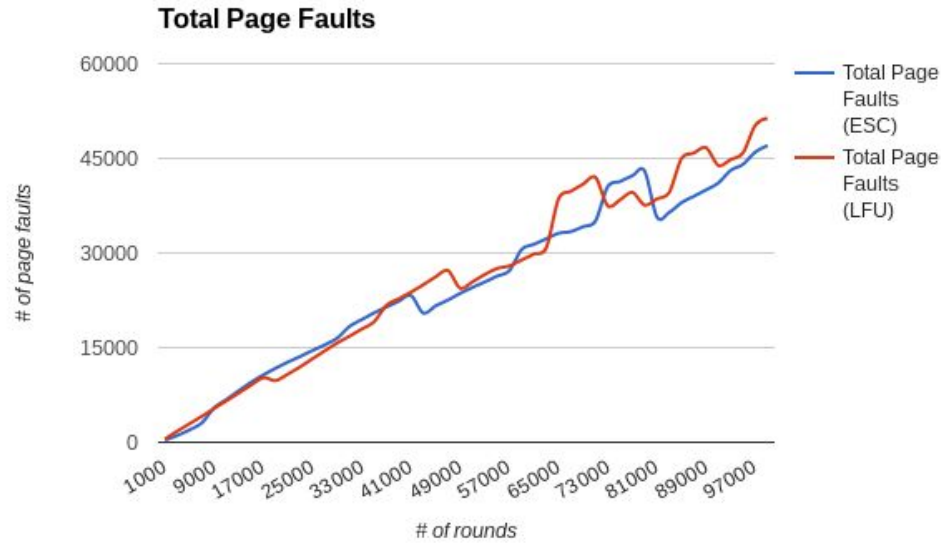

Garrett Gregory && Josh Richmond

- On average the Least Frequently Used algorithm encounters page faults much more often than the Enhanced Second chance algorithm

- The Enhanced Second Chance algorithm encounters page faults when attempting to write out much more often than the Least Frequently used algorithm

- The total page faults of both algorithm remains somewhat close together even when the types of page faults differs so severely
- The total page faults of the Least Frequently Used algorithm is on average about 9% greater than that of the Enhanced Second Chance algorithm
